PROFESSIONAL SUMMARY

Computer Science student in the 6th semester with over one year of professional experience in Information Technology, working on web development, process automation, databases and IT infrastructure. I build full-stack applications with React, Node.js and SQL, and I am interested in automation, data analysis, Artificial Intelligence and Machine Learning.

EDUCATION

Pontifical Catholic University of Paraná (PUCPR) **2024 – Dec 2027**

Bachelor of Computer Science – 6th semester

EXPERIENCE

GOB-PR **10/2025 – Present**

Information Technology Intern

- Developed an internal routine management system to meet team needs.
- Developed and maintained web pages for internal requests.
- Designed and integrated databases used by internal systems and spreadsheets.
- Automated and optimized Excel spreadsheets, reducing manual work.
- Deployed and configured GLPI, and set up test servers for applications.
- Provided technical support and troubleshooting for hardware and software.

PROJECTS

Save Point – Game Library **March 2026**

Full-stack web application | React, Node.js, Express, MySQL | github.com/lucasferraz-dev/save_point

- Built a REST API with Node.js/Express featuring full CRUD: create, read, update, delete and detailed record views.
- Implemented back-end validation and MySQL integration to ensure data consistency.
- Implemented pagination and a responsive dark-theme interface with React.

Personal Portfolio **July 2026**

React, Vite, Tailwind CSS, Framer Motion | ferrazdeveloper.com

- Built my portfolio with React and Vite, styled with Tailwind CSS and animated with Framer Motion.
- Deployed and monitored traffic on Vercel.

HACKATHONS

Localiza Hackathon **October 2026**

12-hour hackathon | Team of 5 | Python, pandas, NumPy, scikit-learn, matplotlib

- Sized the charging infrastructure for a rental company's electric vehicle fleet across multiple branches (chargers, power supply, contracted demand and charging policy), balancing customers served and cost.
- The team built a discrete-event simulator that matched the official judge in 7 of 8 validation scenarios, combined with exhaustive and local search optimized for the score, ML models (Gradient Boosting, KMeans, Isolation Forest) to predict performance and test robustness, and parallel processing.
- Responsible for team planning and strategy and for communication with mentors; led the decision to shift focus from ML to score-optimized search.
- **Top 10 out of about 18 teams** (~90 participants), within about 3% of the top teams' score.

SKILLS

Languages: Python, JavaScript, Java, C, C++, PHP
Web: React, Node.js, Express, HTML, CSS, Tailwind CSS, Vite
Databases: SQL, MySQL, SQLite, SQLAlchemy
Data & ML: pandas, NumPy, scikit-learn, matplotlib
Tools: Git, GitHub, Vercel, Excel, GLPI
Studying: Machine Learning, Artificial Intelligence, Distributed Programming
Spoken: Portuguese (native), English (intermediate), Spanish (Basic)
